Single Stage Pressure Regulator

VSR-50UB Series

Product Feature

- Single-stage pressure regulator
- 10µin. Ra surface finish (25µin. Ra optional)
- Minimized internal volume for short purge times
- All materials used meet ASTM A479 / A484 / A276 standards
- Internal connectors for pressure gauges
- Flow capacity: to 15 slpm (standard), to 30 slpm (optional)
- 100% helium-leak-tested

Dimensions (mm)

Flowchart

Technical Data

Type:	single-stage
Inlet pressure P1:	150 psig (10bar)
Outlet pressure P2:	Vac to 10/30/60/100 psig (0.7/2/4/7bar)
Surface finish:	10µin. Ra (25µin. Ra optional)
Materials	
Body:	see ordering info
Valve seat:	PCTFE (Vespel® optional)
Diaphragm:	Hastelloy® C276
Inlets and Outlets:	1/4" VFS fitting and tube weld
Temperature range:	-40°F to +160°F (-40°C to +71°C)
Leak rate: (to atmosphere)	1x10 ⁻⁹ mbar l/s He
(via seat)	1x10 ⁻⁸ mbar l/s He
Flow capacity:	Cv=0.06 (Cv=0.1 optional)
Supply pressure effect:	0.2 psig rise in delivery pressure per 20 psig source pressure drop @Cv=0.06 0.4 psig rise in delivery pressure per 20 psig source pressure drop @Cv=0.1
Weight:	approx. 0.5kg (depending on connections or options)

Single Stage Pressure Regulator

VSR-210UC Series

Product Feature

- Single-stage pressure regulator
- 10µin Ra average surface finish
(10µin. Ra max, 7µin. Ra max. 5µin. Ra max optional)
- Minimized internal volume for short purge times
- All materials used meet ASTM A479 / A484 / A276 standards
- Internal connectors for pressure gauges
- Force compensation has wider flow capacity
- High control accuracy
- Metal-to-metal seal to atmosphere
- Simple outlet pressure limitation by hand-wheel
- 100% helium-leak-tested
- Tied-diaphragm design

Dimensions (mm)

Technical Data

Type:	single-stage
Inlet pressure P1:	Max. 3000 psig (200bar)
Outlet pressure P2:	Vac to 30/60/100/150/250 psig (2/4/7/10/17bar)
Surface finish:	10µin Ra average surface finish (10µin. Ra max, 7µin. Ra max, 5µin. Ra max optional)
Materials	
Body:	see ordering info
Valve seat:	PCTFE (Vespel® optional)
Diaphragm:	Hastelloy® C276
Inlets and Outlets:	1/4" / 3/8" / 1/2" or 3/4" VFS fitting or tube weld
Bonnet port:	1/8" NPT(F) (on panel mount option, bonnet port is not threaded)
Temperature range:	-40°F to +160°F (-40°C to +71°C)
Leak rate: (to atmosphere)	1x10 ⁻⁹ mbar l/s He
(via seat)	1x10 ⁻⁸ mbar l/s He
Flow capacity:	Cv=0.65, Cv=1.1 (HF option)
Supply pressure effect:	3.5 psig rise in delivery pressure per 100 psig source pressure drop 4.2 psig rise in delivery pressure per 100 psig source pressure drop (FC option)
Weight:	approx. 2.0kg (depending on connections or options)

Dual Stage Pressure Regulator

VSR-710UC Series

Product Feature

- Dual-stage pressure regulator
- 10µin Ra average surface finish
(10µin. Ra max, 7µin. Ra max. 5µin. Ra max optional)
- Minimized internal volume for short purge times
- All materials used meet ASTM A479 / A484 / A276 standards
- Internal connectors for pressure gauges
- Flow capacity: to 30 slpm (standard), to 120 slpm (optional)
- High control accuracy
- Metal-to-metal seal to atmosphere
- Simple outlet pressure limitation by hand-wheel
- 100% helium-leak-tested
- Tied-diaphragm design

Dimensions (mm)

Technical Data

Type:	Dual-stage
Inlet pressure P1:	3500 psig (250bar)
Outlet pressure P2:	Vac to 30/60/100 psig (2/4/7bar)
Surface finish:	10µin Ra average surface finish (10µin. Ra max, 7µin. Ra max, 5µin. Ra max optional)
Materials	
Body:	see ordering info
Valve seat:	PCTFE (Vespel® optional)
Diaphragm:	Hastelloy® C276
Inlets and Outlets:	1/4" / 3/8" VFS fitting and tube weld
Bonnet port:	1/8" NPT (on panel mount option, bonnet port is not threaded)
Temperature range:	-40oF to +160oF (-40oC to +71oC)
Leak rate: (to atmosphere)	1x10-9 mbar l/s He
(via seat)	1x10-8 mbar l/s He
Flow capacity:	Cv=0.05
Supply pressure effect:	0.05 psig rise in delivery pressure per 100 psig source pressure drop
Weight:	approx. 2.5kg (depending on connections or options)

Diaphragm Valve

VDV32UC Series

Product Feature

- Suitable for ultra-pure, flammable or toxic fluid lines in semiconductor manufacturing equipment and facilities
- Direct diaphragm construction with superior sealing performance, remarkable durability, compactness and particle and dead-space-free performance
- Valve open and closed position is easily visible at a glance
- Excellent gas displacement characteristics
- EP treatment is standard for all wetted surfaces
- Standard seat material is PCTFE, Polyimide/PFA is option

Diaphragm Valve VDV52UC Series

Product Feature

- Suitable for ultra-pure, flammable or toxic fluid lines in semiconductor manufacturing equipment and facilities
- Direct diaphragm construction with superior sealing performance, remarkable durability, compactness and particle and dead-space-free performance
- Valve open and closed position is easily visible at a glance
- Excellent gas displacement characteristics
- EP treatment is standard for all wetted surfaces
- Standard seat material is PCTFE, Polyimide/PFA is option

Low-pressure Diaphragm Valve Manifold VDV36UB Series

Product Feature

- Excellent degassing characteristics is achieved through minimized flow paths by combining 2 of VDV32 diaphragm valves together in one valve body.
- Fewer welds over standard valve alignments
- Reduces space requirements
- Compact tubing arrangement
- Dead space free configuration

Diaphragm Valve VDV38UC Series

Product Feature

- Suitable for ultra-pure, flammable or toxic fluid lines in semiconductor manufacturing equipment and facilities
- Direct diaphragm construction with superior sealing performance, remarkable durability, compactness and particle free performance
- Valve open and closed position is easily visible at a glance
- Excellent gas displacement characteristics
- EP treatment is standard for all wetted surfaces
- Standard seat material is PCTFE, Polyimide is option

Metering Bellows Valve

VBMV Series

Product Feature

- Micrometer-style handle for precise and repeatable flow setting.
- Micrometer handle measures stem position in 0.001 in. (0.025 mm) increments.
- The product is fabricated in compliance with the VS001B process specification
- Working pressure up to 700 psig (48.2 bar)
- Temperature up to 315°C (600°F)
- 316 stainless steel construction
- Cv = 0.019 with metering stem tip
- Cv = 0.30 with regulating stem tip

Technical Data

Valve body vs. bellows seal	Stem tip	Stem taper	Cv	Internal volume in.3 (cm3)	Series

Metering Valve VMV Series

Product Features

- Low pressure metering valves
- Body materials: 316
- Panel installation is possible
- The product is fabricated in compliance with the VS001B process specification
- Vernier handles options
- Straight and Angle flow patterns
- Working pressure: Max. 2000psig (138bar)
- Straight-pattern flow coefficients (Cv) from 0.004 to 0.16

Technical Data

Series	Pressure-Temperature Ratings		Orifice in. (mm)	Shutoff Service	Stem Taper (Included Angle)
	Temperature °C	Working Pressure bar			
A type	-23°C to +204°C (FKM O-rings)	137	0.032 (0.81)	No	1°
B type			0.056 (1.42)	No	3°
C type	-23°C to +148°C (Buna N, O-rings)	68.9 ^①	0.128 (3.25)	Yes ^②	6°

① Downstream pressure 500 psig (34.4 bar) max when valve requires adjustment at pressure due to strength limitations of the fine-pitch threads and high operating torque.

② Stainless steel L series valves are not recommended for shutoff in vacuum or gas service, or for repetitive shutoff in liquid service.

Flow Coefficient at Turns Open

Flow Data at 70°F (20°C)

A type Metering Valves

Max. Flow Cv=0.004	
Pressure Drop to Atmosphere bar	Air Flow std L/min
0.68	1.1
3.4	2.8
6.8	5.6

B type Metering Valves

Max. Flow Cv=0.03	
Pressure Drop to Atmosphere bar	Air Flow std L/min
0.68	9.3
3.4	25.4
6.8	42.4

C type Metering Valves

Max. Flow Cv=0.16	
Pressure Drop to Atmosphere bar	Air Flow std L/min
0.68	56.6
3.4	181
6.8	323

Options and Accessories

Vernier Handle

Product Features:

- Helps ensure repeatable flow adjustments.
- Provides readings accurate to 1/25 turn.
- Kits contain all parts necessary to add a Vernier handle to an existing valve.

Ordering Example:

SS-VMV-AL-02-Y

Ordering Information

Atomic Layer Deposition Valve VALD Series

Product Feature

- Ultrahigh cycle life with high-speed actuation
- Normally open and normally closed pneumatic actuation
- Electronic or optical actuator position-sensing option
- The product is fabricated in compliance with the VS001A process specification
- Suitable for ultrahigh-purity applications
- Modular surface-mount, tube butt weld, and VFS end connections
- Opening and closing time of less than 5ms
- Fully swept flow path facilities
- Thermal isolation coupling optional

Technical Data

Max. Working Pressure:	150 psig (10bar)
Nominal Diameter:	Φ4.1
Working Temp.:	-9°F ~ 399°F (-23°C ~ 200°C) Body Max. Temp 200°C

Materials

Body:	see ordering info
Diaphragm:	Elgiloy®
Seat:	High purity PFA
Flow capacity:	Cv=0.27
Weight:	approx. 1.54kg

S: Electronic actuator-position sensor

Vacuum Generator

VVG Series

Product Feature

- Max. vacuum pressure: -90kPa
- Stainless steel 316L construction
- MMHG (Torr) vacuum generators
- The product is fabricated in compliance with the VS001B process specification
- With a minimum source nitrogen pressure of 90 psig (6bar)
- 100% helium leak test

Dimensions (mm)

All-Welded Check Valve

VUCV Series

Product Feature

- All-welded design body with minimal dead space
- Cracking pressure less than 2 psig (0.13bar)
- The product is fabricated in compliance with the VS001B process specification
- 316L SS Materials for ultra-high purity grackle
- Strong durability as well as corrosion resistance for long cycle life
- Elgiloy® spring material with free noise in the process of using

Technical Data

Working Pressure :	3000 psig (200bar)
Opening pressure:	<2 psig (0.13bar)
Working Temperature :	-10~80°C
Material	
Body:	SS 316L
Sprting:	Elgiloy®
O-ring :	FKM (standard) EPDM / FFKM (optional)
Flow Capacity:	Cv=0.55 (1/4"
	Cv=0.70 (1/2"

Dimensions (mm)

End Cornections	Dimensions (mm)	
	A	B
1/4" VFS male	45.7	22
1/2" VFS male	52.5	27

Ordering Information

Product Feature

- Compact check valve
- O-ring Materials: FKM standard, EPDM or FFKM optional
- Working pressure: Max. 6000 psig (413 bar)
- The product is fabricated in compliance with the VS001B process specification
- Opening pressure: 1/3psi / 1psi
- Inlet/outlet connection: VFS fitting

Dimensions (mm)

Ordering Number	Dimensions (mm)

Adjustable Check Valve

VCA Series

Product Feature

- Check Valve with Adjustable Pressure
- Set the opening pressure via the adjusting screw
- The locking screw keeps the setting
- The product is fabricated in compliance with the VS001B process specification
- 316 stainless steel and brass materials

Typical Applications

- Used for overpressure discharge after the pressure regulating valve of the special gas equipment.
- Scenarios of one-way circulation that require pressure setting

Filter VUF Series

Product Feature

- The VUF series is an in-line gas filter designed for ultra-high purity gas filtration applications
- Filter material: PTFE, Shell material: 316L
- High particle removal efficiency
- Excellent chemical compatibility
- The product is fabricated in compliance with the VS001B process specification
- Filtration accuracy: 0.003 μ m
- High temperature and high pressure working environment
- Compact and easy to install
- 100% helium leak test

Filter

VFH Series

Product Feature

- The VFH Series is an In-Line filtration device
- Filter material: 316L
- The product is fabricated in compliance with the VS001B process specification
- Compact size and lightweight
- Outstanding chemical compatibility
- Tested for use with oxygen

In-line Type

Technical Data

Working Pressure:	2350 psig (162bar)
Working Temperature:	-10~100°C
Material	
Body:	SS 316L
Filter Element:	SS 316L
Gasket:	SS 316L / PTFE
End Connection:	VFS Threaded Fitting

Dimensions (mm)

End Connections	Dimensions (mm)	
	L	B
1/4" VFS male	79.3	32
1/2" VFS male	84.4	32

Ordering Information

VFH - S - MV4 - MV4 - 2

Material	Nominal Pore Size
S: 316L	0.5: 0.5 µm
Inlets / Outlets	2: 2 µm
MV4: 1/4" VFS male	5: 5 µm
MV8: 1/2" VFS male	10: 10 µm
	20: 20 µm
	40: 40 µm
	70: 70 µm

Product Feature

- All-metal filter
- Compact design
- Protect sensitive gas componers from particle damage
- Zntegrate into the gas system with out adding length
- Retain particles down to 0.3µm
- The product is fabricated in compliance with the VS001B process specification
- Filtration accuracy: 0.003µm
- Dired with high purity nitragen
- Fits in place of standard 1/4", 1/2" VFS Gasket

Flow Rata

Dimensions (mm)

G8: 1/2" VFS Gasket

Flow Switch

VEFS1 Series

Product Feature

- Flow thru design free of deadlegs or unswept zones
- SS 316L VAR secondary remelt material
- The product is fabricated in compliance with the VS001A process specification
- Vacuum to 3,500 psig (241 bar)

Technical Data

Source pressure:	vacuum to 3500 psig (241 bar)
Flow trip reference points:	25/50/100 slpm (N2 at 100 psig)
Accuracy:	±10%
Installation orientation:	Vertical within 8° and inlet port at the bottom
Operating temperature:	-10~175°F (-23~80°C)
Body:	SS 316L VAR
Inlet / Outlet:	1/4" tube weld / VFS fitting
Leakage (Outboard) :	2x10 ⁻¹⁰ mbar l/s He
Reed Switch —	
Type:	SPDT, 3 wire / 2 position
Power:	30VDC / 3W max
Switching current:	0.2A max
Carrying current:	0.5A max
Initial contact resistance:	0.1 Ohm max
Cable length:	3m
Wire gauge:	24AWG

Cable —
Blue: common
Brown: normally closed
Black: normally open

General Information

Materials

Material	Ordering Number Designator	Specification
Glands, Bodies, and Nuts		
316L stainless steel	Standard	Bar stock: ASME SA479, ASTM A276 Forgings: ASME A182
316L secondary remelt stainless steel	-SLV	Bar stock: ASME SA479, ASTM A276 Forgings: ASME A182
Gaskets		
Nickel	-NI	ASTM B162
316L stainless steel	Standard	ASTM A240, ASTM A167

* The product is fabricated in compliance with the VS001A process specification

Dimensions

- Dimensions are for reference only and may change without prior notice
- The D1 dimension refers to the smallest nominal inside diameter of the part

Pressure Ratings

- Ratings are based upon tests conducted using VFS assemblies
- All ratings comply with calculations per ANSI Code for Pressure Piping B31.3
- To determine pressure ratings in accordance with ANSI B31.3, multiply psig rating by 0.94
- Ratings determined at ambient temperature

Components	Material	Temperature, °F (°C)
Fittings	316L stainless steel	1000 (537)
	316L secondary remelt stainless steel	1000 (537)
Gaskets	316L stainless steel	1000 (537)
	Nickel	600 (315)

Testing

The VFS assembly with silver plating has been helium leak tested to a rate of 4×10^{-9} mbar l/s He and the unplated gasket to a rate of 4×10^{-11} mbar l/s He without leakage.

Face Seal Fitting

VVR Series

Typical VFS Assemblies

VFS assemblies are made up of four or five basic components.

① Not designed for gasket retainer assembly.

② Also available as a rotatable plug. Ordering number: VVR-P8-R

* Default process spec: VS001B. If ordering VS001A-spec fittings for VIGOUR Ultra-High Purity Products, add "P" to the order number.

Example: VVR-P4-P

① VFS components with fixed threads must remain stationary during installation.

These fitting connections should be assembled only to glands with rotating male or female threaded nuts.

② Not designed for gasket retainer assembly

③ May contain internal diameter transitions

* To order fittings manufactured for Surface finish Ra(Average)<0.4 add BA to the ordering number. Example: VVR-MC4-M4-BA

* Default process spec: VS001B. If ordering VS001A-spec fittings for VIGOUR Ultra-High Purity Products, add "P" to the order number. Example: VVR-MC4-M4-P

Face Seal Fitting

VVR Series

Flow Restrictors

- This product can be used in liquid or gas delivery systems where repeatable flow reduction or limiting is required.
- one piece, compact design saves space
- standard orifice sizes drilled through a 1/4 in. male VFS union
- no dead volume for clean operation

Product Feature

- Cylinder Connections
- Connect to a cylinder valve
- The product is fabricated in compliance with the VS001B process specification
- 1/4" NPT male / 6mm tube fitting / 6mm OD tube connection
- All connections are degrease to oxygen service
- 15µin. Ra max., 10µin. Ra average surface finish
- Products tested & packaged in Class 100 cleanroom

Pressure Gauge VGU/VRU/VGT/VRT Series

Product Feature

- UHP “clean” for semiconductor gas applications, in accordance with SEMI/SEMATECH
- Purged with nitrogen
- Protective cap over threaded connection
- The product is fabricated in compliance with the VS001B process specification
- 100% factory calibrated and helium leak tested to a maximum rate of 1×10^{-9} mbar l/s He
- Products tested & packaged in Class 100 cleanroom

Contact Gauge

VGU20SE / VRU20SE Series

Product Feature

- Contact gauge (KI) with inductance contact
- For monitoring gas supply pressure and shortage
- standard surface finish 10 μ m. (0.25 μ m) Ra
- For inert, combustible, oxidizing, and corrosive gases and gas mixtures
- The product is fabricated in compliance with the VS001B process specification
- Line 0.5m
- With NAMUR sensor
- Set point adjustable over 0~24% of scale
- Tested for use with oxygen
- Products tested & packaged in Class 100 cleanroom

Typical Applications

Gas panels may be optionally equipped with contact pressure gauges. Contact pressure gauges combine the advantages of in situ readings with the demands of electrical signal transmissions. In combination with signal boxes, this creates visual and acoustic warning signals in the case of pres-sure drop and the monitoring of line pressure according to adjustable thresholds.

Technical Data

Dual scale:	bar / psi
Connection:	1/4" VFS Male / 1/4" VFS Female
Size:	2"
Accuracy:	$\pm 2.5\%$
Body Material:	316L
Switching function:	NC
Outlet type:	NAMUR
Temperature:	-25~100°C

Dimensions (mm)

VGU

VRU

Contact Gauge VCG20S/VRG20S Series

Product Features

- Contact gauge (KI) with inductance contact
- For monitoring gas supply pressure and shortage
- For inert, combustible, oxidizing, and corrosive gases and gas mixtures
- The product is fabricated in compliance with the VS001B process specification
- standard surface finish 10µin. (0.25µm) Ra
- internals are electropolished to optionally meet purrty standards
- 100% helium-leak-tested
- Products tested & packaged in Class 100 cleanroom

Typical Applications

Gas panels may be optionally equipped with contact pressure gauges. Contact pressure gauges combine the advantages of in situ readings with the demands of electrical signal transmissions. In combination with signal boxes, this creates visual and acoustic warning signals in the case of pres-sure drop and the monitoring of line pressure according to adjustable thresholds.

Technical Data

Dual scale:	bar / psi
Connection:	VFS connection
Size:	2"
Accuracy:	Grade A per ASME B40.1

Scope

This document specifies guidelines used by VIGOUR Company for producing ultrahigh-purity (UHP) electropolished stainless steel products as well as ultrahigh-purity plastic products. This document must be used in conjunction with product catalogs, technical bulletins, and reports for complete product information.

Design

Products are designed with specific functional industry standards in mind. Where specific test results exist in the literature, the following standards are applicable:

Stainless Steel Products:

- Moisture analysis in accordance with ASTM F1397, "Standard Test Method for Determination of Moisture Contribution by Gas Distribution System Components"
- Hydrocarbon analysis in accordance with ASTM F1398, "Standard Test Method for Determination of Total Hydrocarbon Contribution by Gas Distribution System Components"
- Ionic cleanliness in accordance with ASTM F1374, "Standard Test Method for the Determination of Ionic/Organic Extractables of Internal Surfaces—IC/GC/FTIR for Gas Distribution Systems Components"

Materials Guidelines

Stainless steel is the industry-preferred material for UHP products used in gas systems due to the inherent properties of corrosion and oxidation resistance. AISI type 316L (UNS S31603) low-carbon stainless steel is most commonly used in industry due to the resistance to intergranular corrosion following welding or stress relieving.

- Stainless steel bar stock conforms to the following standards:
 - > ASTM A479, "Stainless and Heat-Resisting Bars and Shapes for Use in Boilers and Other Pressure Vessels"
 - > ASTM A484, "Specification for General Requirements for Stainless and Heat-Resisting Bars, Billets, and Forgings"
 - > ASTM A276, "Stainless and Heat-Resisting Bars and Shapes"
- Plastic material chemical composition is in accordance with:
 - > ASTM D3294, "Standard Specification for PTFE Resin Molded Sheet and Molded Basic Shapes"
 - > ASTM D4894, "Standard Specification for Polytetrafluoroethylene (PTFE) Granular Molding and Ram Extrusion Materials" for Type I, Grade 1 polytetrafluoroethylene.
- 316L VAR and 316L VIM-VAR bar stock conform to SEMI F20, "Specification for 316L Stainless Steel Bar, Forgings, Extruded Shapes, Plate, and Tubing for Components Used in General Purpose, High Purity, and Ultra-High Purity Semiconductor Manufacturing Applications".
- Primary steel processing is either argon oxygen decarburization (AOD) or vacuum induction melting (VIM). A secondary remelt operation such as vacuum arc remelt (VAR) may be used for additional cleanliness of wetted components.
- Key requirements of certain elements within the chemical make-up have been tightened by VIGOUR for more consistency of chemical make-up throughout UHP products; see Table 1.

Table 1: VIGOUR Specifications, wt %

Element	316 AOD	316L AOD	316L VAR	316L VIM-VAR
C (carbon)	0.035%~0.050%	0.015%~0.030%	0.015%~0.030%	0.015%~0.030%
S (sulfur)	0.020%~0.030%	0.005%~0.030%	0.005%~0.012%	0.005%~0.010%
Mn (manganese)	1.50%~2.00%	1.00%~1.50%	1.00%~1.50%	0.15%~0.40%

Verifications of stainless steel products include but are not limited to the following:

- Material conformity is verified in accordance with Practice A of ASTM A262, "Standard Practices for Detecting Susceptibility to Intergranular Attack in Austenitic Stainless Steels."
- Chemical composition is verified in accordance with ASTM A751, "Test Methods, Practices, and Terminology for Chemical Analysis of Steel Products."

- Surface quality is verified through ultrasonic testing in accordance with ASTM E214, "Practice for Immersed Ultrasonic Testing by the Reflection Method Using Pulsed Longitudinal Waves".
- Inclusions are detected by performing a JK Test in accordance with ASTM E45, "Standard Practice for Determining the Inclusion Content of Steel, Method A," with ratings based on Plate I-r.

Manufacturing and Surface Finish

During manufacturing, dimensions and surface finishes are monitored closely. Each machined component has extremely fine surface finishes, smooth transitions, fully swept flow paths, and square weld ends to minimize the number of entrapped or generated particles.

- Stainless Steel Product—criteria of SEMI F19, "Specification for the Surface Condition of the Wetted Surfaces of Stainless Steel Components" and the procedures of SEMI F37, "Method for Determination of Surface Roughness Parameters for Gas Distribution System Components"
- The wet surface roughness Ra of ultra-high purity stainless steel products after electrolytic polishing is less than 8µin (0.20µm), and the wet surface roughness Ra without electrolytic polishing is less than 15µin (0.40µm).
- VIGOUR roughness numbers published in product catalogs refer to the process mean, or the roughness value that represents the arithmetic average for a given production process in accordance with SEMI F37.
- Surface roughness/finish is verified using a copy machine in accordance with ASME B 46.1, measured using the maximum available length of the joint or valve bore, excluding conical surfaces, intersections or welds.

Electropolishing and Passivation

The wetted surfaces of fittings and valve bodies are electropolished to improve surface conditions and to form a corrosion resistant surface layer of chromium oxide. After electropolishing, all surfaces are passivated to remove free iron.

- Electropolishing processes are based on ASTM E1558, "Electrolytic Polishing of Metallographic Specimens" and are processed using custom fixturing.
- Passivation processes are based on ASTM A380, "Cleaning, Descaling, and Passivation of Stainless Steel Parts, Equipment, and Systems."
- Verification of electropolishing and passivation is performed in accordance with Table 2.

Table 2: Verification Methods and Specifications

Parameter	Specification	Test Method
Chromium-to-iron (Cr/Fe)	Ratio > 2.0	ESCA (electron spectroscopy for chemical analysis) based on SEMI F60
Chromium oxide to-iron oxide (CrO/FeO)	Ratio > 2.0	
Oxide thickness	≥ 15Å	AES (Auger electron spectroscopy) based on SEMI F72
Surface defect analysis	Maximum of 40 defects, over 5 sample areas	SEM (scanning electron microscopy) based on SEMI F73
Appearance	All parts will be highly reflective, mirror-like, with consistent roughness and a uniform, lustrous finish	Finished parts are visually inspected by the unaided eye using additional bright light

Electrochemical Critical Pitting Temperature

The electrochemical critical pitting temperature (CPT) test, based on ASTM G150, "Standard Test Method for Electrochemical Critical Pitting Temperature of Stainless Steels," is used to determine resistance to localized pitting corrosion. The CPT test measures the temperature at which

the current density increases rapidly beyond a set limit at a set electrical potential. Sodium chloride solution is used, and electrical potential is held constant in the passivation region. The critical corrosion temperature should be greater than 13°C.

Cleaning and Drying

The DI water cleaning system is closed to the outside environment and thereby limits particle contamination. Products move through a series of ultrasonic washing and multistage DI water rinse tanks to a drying chamber. The DI water characteristics are based on the guidelines of:

- Stainless steel components—SEMI E49.6, “Guide for Subsystem Assembly and Testing Procedures—Stainless Steel Systems”.

Table 3: DI Water Characteristics

Characteristic	Capabilities
Resistivity	$\geq 17.5\text{M}\Omega\cdot\text{cm}$ (25°C)
Total organic carbon (TOC)	< 20ppb
Silica	< 5ppb
Bacteria	< 10 colonies per 100 milliliters
Hot DI water temperature	$\geq 60^\circ\text{C}$

Assembly and Testing

To protect parts from airborne contamination, parts are protected and transported directly from the established cleaning system to a clean environment for assembly and testing.

Packaging and Identification

- SEMI E49.6, “Guide for Subsystem Assembly and Testing Procedures—Stainless Steel Systems” for stainless products.
- Identification and traceability information is visible without opening the product package to reduce the chances for contamination of the product and the system to which it is being assembled.

Scope

This document specifies guidelines used by VIGOUR Company for producing stainless steel products intended for photovoltaic (PV) applications. This document must be used in conjunction with product catalogs, technical bulletins, and reports for complete product information. Application of this document is limited to wetted system components.

Design

Products are designed with specific functional industry standards in mind. Where specific test results exist in the literature, the following standards are applicable:

- Moisture analysis in accordance with ASTM F1397, "Standard Test Method for Determination of Moisture Contribution by Gas Distribution System Components"
- Hydrocarbon analysis in accordance with ASTM F1398, "Standard Test Method for Determination of Total Hydrocarbon Contribution by Gas Distribution System Components"
- Ionic cleanliness in accordance with ASTM F1374, "Standard Test Method for the Determination of Ionic / Organic Extractables of Internal Surfaces—IC/GC/FTIR for Gas Distribution Systems Components."

Materials Guidelines

Stainless steel is the industry-preferred material for UHP products used in gas systems due to the inherent properties of corrosion and oxidation resistance. AISI type 316L (UNS S31603) low-carbon stainless steel is most commonly used in industry due to the resistance to intergranular corrosion following welding or stress relieving.

Stainless steel bar stock conforms to the following standards:

- ASTM A479, "Stainless and Heat-Resisting Bars and Shapes for Use in Boilers and Other Pressure Vessels"
- ASTM A484, "Specification for General Requirements for Stainless and Heat-Resisting Bars, Billets, and Forgings"
- ASTM A276, "Stainless and Heat-Resisting Bars and Shapes"
- SEMI F20-0305, "Specification for 316L Stainless Steel Bar, Forgings, Extruded Shapes, Plate, and Tubing for Components Used in General Purpose, High Purity, and Ultra-High Purity Semiconductor Manufacturing Applications."
- Primary steel processing is either argon oxygen decarburization (AOD) or vacuum induction melting (VIM). A secondary remelt operation such as vacuum arc remelt (VAR) may be used for additional cleanliness of wetted components.
- Key requirements of certain elements within the chemical make-up have been tightened by VIGOUR for more consistency of chemical make-up; see Table 1.

Table 1: VIGOUR Specifications, wt %

Element	316 AOD	316L AOD	316L VAR	316L VIM-VAR
C (carbon)	0.035%~0.050%	0.015%~0.030%	0.015%~0.030%	0.015%~0.030%
S (sulfur)	0.020%~0.030%	0.005%~0.030%	0.005%~0.012%	0.005%~0.010%
Mn (manganese)	1.50%~2.00%	1.00%~1.50%	1.00%~1.50%	0.15%~0.40%

Verifications of stainless steel products include but are not limited to the following:

- Material conformity is verified in accordance with Practice A of ASTM A262, "Standard Practices for Detecting Susceptibility to Intergranular Attack in Austenitic Stainless Steels."
- Chemical composition is verified in accordance with ASTM A751, "Test Methods, Practices, and Terminology for Chemical Analysis of Steel Products."
- Surface quality is verified through ultrasonic testing in accordance with ASTM E214, "Practice for Immersed Ultrasonic Testing by the Reflection Method Using Pulsed Longitudinal Waves" or through an eddy current test performed in accordance with Swagelok standards.
- Inclusions are detected by performing a JK test in accordance with ASTM E45, "Standard Practice for Determining the Inclusion Content of Steel, Method A," with ratings based on Plate I-r.

Manufacturing and Surface Finish

During manufacturing, dimensions and surface finishes are monitored closely. Each machined component has extremely fine surface finishes, smooth transitions, fully swept flow paths, and square weld ends to minimize the number of entrapped or generated particles.

- Surface roughness/finish criteria are based on SEMI F19, "Specification for the Surface Condition of the Wetted Surfaces of Stainless Steel Components" and the procedures of SEMI F37, "Method for Determination of Surface Roughness Parameters for Gas Distribution System Components."
- The wet surface roughness Ra of ultra-high purity stainless steel products after electrolytic polishing is less than 8µin (0.20µm), and the wet surface roughness Ra without electrolytic polishing is less than 15µin (0.40µm).
- VIGOUR roughness numbers published in product catalogs refer to the process mean, or the roughness value that represents the arithmetic average for a given production process in accordance with SEMI F37.
- Surface roughness/finish is verified by using a suitable profiling instrument in accordance with ASME B46.1. Measurements are taken over the maximum available length of the fitting or valve bore, excluding tapered surfaces, intersections, or welds.

Electropolishing and Passivation

This section refers to electropolished products only.

The wetted surfaces of fittings and valve bodies are electropolished to improve surface conditions and to form a corrosion resistant surface layer of chromium oxide. After electropolishing, all surfaces are passivated to remove free iron.

- Electropolishing processes are based on ASTM B912, "Standard Specification for Passivation of Stainless Steels Using Electropolishing" and are processed using custom fixturing.
- Passivation and pre-electropolishing cleaning processes are based on ASTM A380, "Cleaning, Descaling, and Passivation of Stainless Steel Parts, Equipment, and Systems."
- Verification of electropolishing and passivation is performed in accordance with test methods in section 6 of ASTM B912, "Standard Specification for Passivation of Stainless Steels Using Electropolishing."

Electrochemical Critical Pitting Temperature

This section refers to electropolished products only.

The electrochemical critical pitting temperature (CPT) test, based on ASTM G150, is used to determine resistance to localized pitting corrosion. The CPT test measures the temperature at which the current density increases rapidly beyond a set limit at a set electrical potential. Sodium chloride solution is used, and the electrical potential is held constant in the passivation region. The critical corrosion temperature should be greater than 10°C.

Cleaning and Drying

The DI water cleaning system is closed to the outside environment and thereby limits particle contamination. Products are cleaned in multistep processes through a series of heated ultrasonic washing, DI water rinsing, and a filtered drying chamber. Cleaning agents are selected in accordance with ASTM G127.

- The DI water characteristics are based on the guidelines of ASTM D5127 Type E-3, "Standard Guide for Ultra Pure Water Used in the Electronics and Semiconductor Industries."

Table 2: DI Water Characteristics

Characteristic	Capabilities
Resistivity	≥ 12MΩ·cm (25°C)
Total organic carbon (TOC)	< 300ppb
Silica	< 50ppb
Bacteria	< 50 colonies per 100 milliliters

Assembly and Testing

To protect parts from airborne contamination, parts are covered and transported directly from the established cleaning system to a clean work cell for assembly and testing.

Packaging and Identification

- Packaging and identification procedures meet the requirements of SEMI E49.6, "Guide for Subsystem Assembly and Testing Procedures—Stainless Steel Systems" for stainless products.
- products are packaged to keep products free from outside contaminants during shipping. Identification and traceability information is visible without opening the product.

Pressure Regulator and Valve Selection Guide

Product Warranty Service

1. Warranty Term

One year after purchase. For any malfunction of a product purchased from VIGOUR that occurs during the warranty term as a result of failure, at the time of delivery, to fulfill the specifications intended, VIGOUR will repair or replace the product at no charge.

2. Range of Warranty

The warranty is limited to our products that were produced at and delivered from our VIGOUR.

Regardless of the warranty term, this warranty does not cover troubles or accidents, or any customer's opportunity loss, lost profit, secondary damage or damage to anything other than our products, as well as replacement work, readjustment of local machinery or equipment or trial operation by the customer. Safety management associated with the use of a product purchased from VIGOUR and peripheral equipment will be the responsibility of the user.

[Exclusions]

The warranty does not cover any of the following cases, even if it occurs during the term of the warranty.

- 1) Cases where failure occurs resulting from the replacement (maintenance) of parts by a person other than a VIGOUR engineer.
- 2) Cases where failure occurs due to a natural disaster or force majeure.
- 3) Cases where failure occurs due to misuse of the product or not taking the required precautions in handling the product.
- 4) Cases where the product is used or stored in an unsuitable environment.
- 5) Cases where the product is used for purposes other than the designated objectives, the product is used at a range exceeding the range of conditions specified in the design, or a purchased product is modified.
- 6) Cases where corrosion and failure occurs due to external factors or a corrosive liquid.
- 7) Any other case judged to be outside of the responsibility of VIGOUR.
